

How Water Quality Intelligence Works

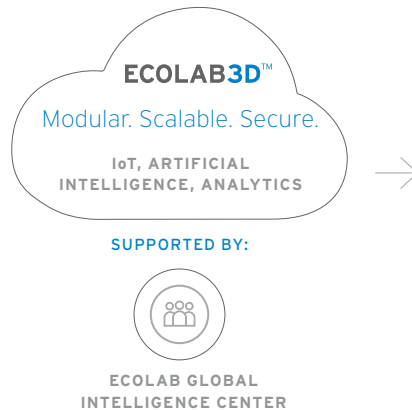

1 Data Input from Multiple Sources

By bringing together multiple sources of data, Water Quality Intelligence provides a more comprehensive picture of your water systems and asset health.

2 Water Quality Intelligence powered by ECOLAB3D™

Provides greater visibility into your water treatment performance by streamlining vast data into a more comprehensive evaluation of your assets.

3 Actionable Insights for Optimal Results

Actionable insights help you to identify underperforming assets in real time and take actions to achieve optimal performance, at an enterprise, site, and asset level.

- One integrated view for all water data
- Rapidly identify off-spec assets for the plant and sites for the enterprise
- Benchmark water performance across assets in the enterprise
- Drive enterprise best practices
- Manage project pipeline
